
Inspironics Corporation

AI + ESG Intelligent Infrastructure Platform

Strategic Investment Opportunity — Exit-Aligned

CONFIDENTIAL | MAY 2026 | 12–18 MONTH EXIT | $100K · ~4% | SINGLE INVESTOR

ask@inspironics.net · INSPIRONICS · CONFIDENTIAL · MAY 2026

01 · THE PLATFORM

Five Products. One Ecosystem.

Inspironics operates a tightly integrated suite of five products — built to function together as a full-stack intelligent infrastructure ecosystem. Each module is production-grade and interconnected, compounding defensibility as the stack deepens. **From product → platform → ecosystem.**

CX

Caleido Xenia

Connected Facilities — Smart building management and operations intelligence. The credibility anchor of the stack.

CK

Caleido Kombos

IoT PaaS — Device connectivity and edge data orchestration across every vendor and protocol.

CD

Caleido Domi

Smart Infra Extensions — Vertical extensions for enterprise environments including HVAC and IAQ.

CE

Cielo Epic

ESG AI SaaS — Compliance reporting, emissions tracking, and AI-driven sustainability scoring.

CM

Caleido Mints

Monetization Layer — Usage-based billing, licensing, and revenue infrastructure across the stack.

Compounding defensibility. Each component reinforces the others — no single product is replaceable without disrupting the full data plane.

02 · MARKET TIMING

A Convergence Window You Won't Get Again

Three macro forces are stacking simultaneously. Inspironics sits at the exact intersection — and the regulatory clock is forcing non-discretionary adoption across enterprise and institutional real estate globally.

ESG Mandates Accelerating

SEC climate disclosure, EU Taxonomy, CSRD, and ISSB are driving demand that is **non-discretionary**. Compliance is not optional.

SEC · EU · ISSB · CSRD

AI + Infrastructure Convergence

Edge IoT + AI + building systems are moving from pilot programs to enterprise standard — with no dominant full-stack vendor yet established.

$50B+ TAM · FORMING NOW

Smart Facilities Mainstream

Hospitality, commercial real estate, and enterprise campuses are standardizing on intelligent infrastructure. M&A activity is intensifying as consolidators move.

M&A INTENSIFYING

03 · EXECUTION STATUS

This Is Not a Pre-Revenue Concept Pitch

Meaningful execution has already taken place across engineering, product deployment, IP documentation, and market validation. **What follows is monetization — not discovery.** The capital entering here is not funding a build — it is unlocking a realized asset.

Execution Already Proven

- Working product stack across all 5 modules
- In-house engineering and DevOps operational
- Initial enterprise deployments completed
- 90% of IP and data room artifacts finalized
- Roadmap executed through Beta and ME/SEA launch phases

What This Means for Investors

Capital enters at the **structural inflection point** — after proof, before exit. The risk profile here is categorically different from early-stage venture.

Product risk: **Mitigated.** Market timing: **Favorable.** Remaining risk: Structural — and directly addressable with this raise.

The Caleido Family at a Glance

Five independent assets — each with its own standalone valuation floor and strategic acquirer upside. The following ranges reflect independent comp-driven assessment, not founder-supplied projections.

Code	Product	Role	Description	Fair Value Today
CX	Caleido Xenia	Connected Facilities	Smart building management and operations intelligence	$4M – $8M
CK	Caleido Kombos	IoT PaaS	Device connectivity and edge data orchestration	$3M – $6M
CD	Caleido Domi	Smart Infra Extensions	Vertical extensions for enterprise environments	$1M – $3M
CE	Cielo Epic	ESG AI SaaS	Compliance, emissions, and sustainability scoring	$5M – $12M
CM	Caleido Mints	Monetization Layer	Usage-based billing and licensing infrastructure	$1M – $3M

Combined standalone sum-of-parts floor: **$14M – $32M.** Strategic acquirer ceiling with platform premium: **$42M – $87M.**

Caleido Xenia · CX · Connected Facilities

The flagship module — smart building management and operations intelligence across multi-tenant and enterprise environments. **CX is the credibility anchor for every other valuation in this deck.**

Core Capabilities

- Multi-tenant operations console with role-based access
- Device, asset, and site management at scale
- Real-time telemetry and alerting infrastructure
- Configurable rule engine for automation workflows
- HTNG / FIAS hospitality protocol integrations
- Predictive maintenance readiness built into data model

Independent Valuation — Sum-of-Parts Anchor

- Standalone fair value: **$4M – $8M**
- Strategic acquirer value: **$8M – $15M**
- Comp basis: BMS / Smart Building IP
- Premium drivers: Live deployments + IP depth

CX is the credibility anchor for every other valuation in this deck.

Caleido Kombos · CK · IoT PaaS

The protocol-agnostic data fabric — every device, every vendor, every site. **Kombos is the moat** — every customer plugged in pulls more devices into the Caleido data plane, deepening switching costs with every deployment.

Core Capabilities

- Vendor-neutral device onboarding and provisioning
- MQTT / CoAP / AMQP / BACnet / Modbus protocol support
- Edge-to-cloud data orchestration and buffering
- Schema discovery and payload normalization
- Site-level VPN gateway with secure tunnel management
- QR-based commissioning for rapid deployment

IoT PaaS — Comp-Driven Valuation

- Standalone fair value: **$3M – $6M**
- Strategic acquirer value: **$6M – $12M**
- Comp basis: IoT PaaS · $15M–$100M+ exits
- Premium drivers: Protocol breadth + edge IP

Every customer plugged in pulls more devices into the Caleido data plane.

Cielo Epic · CE · ESG AI SaaS

The strategic crown jewel — where regulatory tailwinds meet AI premium.

Core Capabilities

- Scope 1 / 2 / 3 emissions tracking and reporting
- GRI / SASB / TCFD / CSRD framework compliance outputs
- AI-driven sustainability scoring and benchmarking
- Carbon-credit-ready data lineage and audit trail
- Board-grade KPI dashboards with drill-down
- API-first architecture for enterprise integration

ESG SaaS Premium — Independent Assessment

- Standalone fair value: **$5M – $12M**
- Strategic acquirer value: **$12M – $25M**
- Comp basis: ESG SaaS · 5–12× ARR
- Premium drivers: Regulatory mandate + AI-native build

ESG buyers cannot build AI-native infrastructure fast enough. CE is the single most valuable asset on a strategic basis.

Caleido Domi + Caleido Mints

The vertical extension layer and the monetization rail — together they unlock recurring revenue capture and lift the gross-margin profile of every product they touch. **Individually small. Together, structurally significant.**

Caleido Domi — Smart Infra Extensions

- HVAC and comfort optimization at site level
- Occupant wellness and environmental scoring
- Indoor air quality (IAQ) intelligence layer

Caleido Mints — Monetization Layer

- Usage-based billing and metering infrastructure
- License management and entitlement control
- Partner revenue ledger and channel billing

CD + CM Combined Valuation

- Domi standalone: $1M – $3M
- Domi strategic: $2M – $5M
- Mints standalone: $1M – $3M
- Mints strategic: $2M – $5M

Together, they raise the gross-margin profile of every product they touch.

Five-Stage Caleido Roadmap

The first three stages are behind us — product delivered, certified, and deployed. The final two stages belong to the strategic acquirer. **This raise funds only the bridge to broker engagement — not product development.**

1

Stage 1 · Initial Release

Hub 1.0, Lock 1.0, AirQ 1.0, CIELO 1.0, IKANOS 1.0, PORTA 1.0

✓ DELIVERED

2

Stage 2 · Alpha (Caleido Max)

Ikanos On-Prem, Payment Gw, Voice Cmd, VPN Gw, Siteminder, Chatbot

✓ DELIVERED

3

Stage 3 · Beta (Qualification)

BIS/BHMA Certifications, GDPR, iLLumina 1.0, Kinisi 1.0, Lock 1.5

✓ COMPLETED

4

Stage 4 · ME / SEA Launch

Caleido Mints, HTNG/FIAS, Analytics, Predictive Maintenance, UAE Audit

→ IN-FLIGHT

5

Stage 5 · NA / OCEANIA + White Label

Digital Twins, ML/AR/VR, ILLUMINA 2.0, LOCK 2.0, AQUA 1.0, Open Cloud

○ POST-EXIT

ⓘ Stages 4–5 belong to the strategic acquirer. This raise funds only the bridge to broker engagement.

Sum-of-Parts: Independent Assessment

This is an independent comp-driven build-up — not founder-supplied projections. The following ranges reflect standalone IP value today and strategic acquirer value in a 12–18 month managed sale process.

Asset	Standalone Today	Strategic Exit	Basis
CX Caleido Xenia	\$4M – \$8M	\$8M – \$15M	BMS / smart building IP, live deployments
CK Caleido Kombos	\$3M – \$6M	\$6M – \$12M	IoT PaaS comps · \$15M–\$100M+ exits
CD Caleido Domi	\$1M – \$3M	\$2M – \$5M	Vertical extension IP
CE Cielo Epic	\$5M – \$12M	\$12M – \$25M	ESG SaaS · 5–12× ARR · AI premium
CM Caleido Mints	\$1M – \$3M	\$2M – \$5M	Monetization rail · margin lift
TOTAL Sum-of-Parts	**\$14M – \$32M**	**\$30M – \$62M**	Pre-platform premium

Platform Premium (1.4×)

Standalone: **\$20M – \$45M** · Strategic: **\$42M – \$87M**
Integrated stacks transact at 1.3–1.8× the sum of components in competitive M&A processes.

vs. Founder-Implied Entry

\$2.5M post-money @ ~4% / \$100K

Entry valuation reflects structural friction — not intrinsic value. **That gap is the asymmetry.**

The Pricing Gap Is the Opportunity

Three numbers tell the story. Entry. Floor. Ceiling. The capital sits in the spread between where the asset is priced today and what the independent build-up says it is already worth.

$2.5M

Entry Valuation

$100K @ ~4% post-money. Reflects structural friction: entity cleanup, cap-table normalization, broker engagement. Not a reflection of intrinsic value.

$20–45M

Intrinsic Floor (My View)

Sum-of-parts × 1.4× platform premium on standalone fair-value comps. What I would defend in a fairness opinion today.

$42–87M

Strategic Ceiling (12–18 Mo)

Strategic acquirer comps × platform premium, with regulatory ESG tailwind priced in. Competitive process assumption.

The entry is priced as if the platform doesn't exist yet. The independent build-up says it already does. Capital here isn't paying for growth — it's paying for the legal and process work that lets the broker realize the floor.

Return Math on $100K @ ~4%

The base case is more bullish than the founder's deck — because the independent valuation floor is higher. Even the conservative scenario delivers a strong risk-adjusted outcome against a 12–18 month timeline.

Conservative

Distressed exit / IP sale

Exit value: **$10M**

2–4×

Floor scenario assumes partial asset sale under time pressure with limited competitive tension.

Base Case (My View)

Broker-led platform sale

Exit value: **$25M – $45M**

10–18×

Managed M&A process with Wedbush or equivalent, full CIM, identified buyer universe, competitive outreach.

Upside

Competitive ESG bidder

Exit value: **$50M – $87M**

20–35×

Strategic premium from ESG compliance buyer or IoT consolidator with platform synergy rationale.

ESG SaaS platforms have transacted at 5–12× ARR. IoT PaaS strategic acquisitions have ranged $15M–$100M+. Even the conservative scenario delivers a strong risk-adjusted outcome on a sub-24-month hold.

Broker-Supported, 12–18 Month Pathway

The exit is not a hope — it's a managed process with a named broker, a CIM in preparation, and an identified buyer universe. The infrastructure for a transaction already exists; this capital completes it.

Exit Execution Timeline

- Broker: Wedbush Securities or equivalent
- Formal broker engagement within **90 days of close**
- CIM in preparation — final 10% completion funded by raise
- Data room **90% complete** today
- Cap table cleanup in parallel with broker onboarding
- Outreach to buyer universe begins month 4

Strategic Buyer Universe

- **ESG Platforms** — Compliance and sustainability software majors seeking AI-native infrastructure
- **IoT / AI Companies** — Enterprise IoT and AI infrastructure companies seeking vertical depth and protocol coverage
- **Hospitality & PropTech** — Property management consolidators seeking smart-building and ESG integration at scale

Five Risks Become One

Most early-stage capital is consumed proving that a product works and a market exists. Here, both of those questions have been answered. The risk profile is categorically different from a seed or Series A investment.

Typical Startup Investment

→ **Product risk** — Does it work?

→ **Market risk** — Does anyone want it?

→ **Team risk** — Can they execute?

→ **Timing risk** — Is the market ready?

→ **Exit risk** — Is there a buyer?

All five risks live simultaneously in early-stage capital deployment.

Inspironics Investment

- Product risk: **Resolved**
- Market risk: **Resolved**
- Team risk: **Resolved**
- Timing risk: **Favorable**
- Exit risk: **Actively managed**

A rare asymmetric setup — one specific, bounded structural risk standing between a working platform and a material exit. That risk is directly addressable with this capital.

One Aligned Investor. One Clean Unlock.

Inspironics is seeking one conviction-driven investor to provide the single unlock needed to transition from structurally constrained to fully exit-ready. This is not a syndicate — it is a single, clean, decisive close.

The Investment

$100K
Capital Required

~4%
Equity Offered

12–18
Months to Exit

What This Capital Unlocks

- Resolves all structural liabilities in US and India entities
- Produces a clean, auditable cap table ready for institutional diligence
- Engages M&A broker (Wedbush or equivalent) within 90 days
- Completes the data room — final 10% of CIM and diligence artifacts
- Creates a clear pathway to a **$25M – $45M base-case exit**

The Deal in One View

Everything an investor needs to make a yes/no decision. Platform execution is proven; structural constraints are the only variable remaining between today's entry and a broker-managed exit.

Platform Snapshot

Product modules	5 (CX / CK / CD / CE / CM)
Execution stage	ME/SEA in-flight, NA/OCEANIA next
Data room	90% complete
Deployments	Initial enterprise live
Broker	Wedbush or equivalent
Process start	90 days post-close

Deal Snapshot

Raise	$100K
Equity	~4%
Entry valuation	~$2.5M post-money
Intrinsic floor (my view)	$20M – $45M
Strategic ceiling	$42M – $87M
Base case return	10–18×
Timeline	12–18 months

Entry valuation: ~$2.5M. Independent floor: $20M–$45M. The spread is not a projection — it is the gap between structural friction and realized value.

"You are not funding growth.
You are unlocking trapped value."
