

Inspironics Corporation

AIoT-Powered Intelligent Infrastructure for the
ESG-Aware Economy

Transforming Buildings, Facilities, and Infrastructure into Measurable Operational
Intelligence Systems

Confidential – Board / Investor / Strategic Review

Inspironics: The AIoT Intelligent Infrastructure Enterprise

Inspironics is executing a decisive evolution — from a connected hospitality product company into a **multi-platform AIoT intelligent infrastructure enterprise**. The company delivers operational intelligence, energy optimization, ESG evidence infrastructure, predictive analytics, and AI-powered facility orchestration across four converging platforms.

Caleido Xenia™

Cognitive Hospitality Infrastructure — SaaS + ESG analytics for hotels, resorts, and REITs

Caleido Domi™

Edge Intelligence + Environmental Sensing — sensors, thermostats, occupancy, and access

Caleido Kombos™

AIoT Data Engineering + Orchestration — MQTT, APIs, Kubernetes, DevSecOps

Cielo Epic™

AI + ESG + Cognitive Intelligence — digital twins, carbon visibility, executive dashboards

ESG Is Not Dying — It Is Operationalizing

The ESG paradigm has undergone a fundamental institutional recalibration. Driven by BlackRock, Vanguard, and EU regulatory frameworks, the market has shifted decisively from narrative-driven sustainability toward evidence-driven operational intelligence and financial materiality.

Old ESG

- Sustainability storytelling
- Reporting-heavy frameworks
- CSR perception management
- ESG branding + activism
- Generic sustainability commitments

New ESG

- Measurable operational intelligence
- Evidence-driven outcomes
- Financial materiality + risk reduction
- Energy optimization + cost savings
- Intelligent infrastructure compliance

Why Inspironics Fits the New ESG Economy

"Inspironics converts ESG from boardroom intent into measurable infrastructure intelligence — deployable, auditable, and financially material."

Sensing Layer

Distributed IoT sensors and smart devices capture real-time environmental, occupancy, and energy data across every facility touchpoint.

Carbon Visibility

Real-time carbon tracking and ESG dashboards deliver governance-grade evidence for institutional reporting and regulatory compliance frameworks.

AI Analytics

Machine learning models convert raw sensor streams into predictive maintenance alerts, energy anomaly detection, and operational efficiency scores.

Digital Twins

Living digital replicas of physical infrastructure enable scenario modeling, predictive interventions, and continuous operational optimization at scale.

Platform Convergence Strategy

Inspironics has engineered a **unified intelligent infrastructure stack** — four integrated layers delivering seamless edge-to-cloud operational intelligence, ESG accountability, and enterprise-grade scalability across any building class or industry vertical.

Powered by Azure · AWS · MQTT · Kubernetes · Jenkins · Digital Twin APIs

PLATFORM 01

Caleido Xenia™ — Cognitive Hospitality Infrastructure

Caleido Xenia is Inspironics' flagship SaaS platform for hotels, resorts, REITs, and healthcare hospitality — delivering guest intelligence, maintenance automation, and energy optimization within a single unified operating environment.

Revenue Architecture

- SaaS subscription licensing
- Per-room recurring revenue
- ESG analytics modules
- Enterprise integration fees

Core Capabilities

- AI-driven guest experience personalization
- Predictive maintenance automation
- Real-time energy optimization
- Facility compliance + ESG reporting
- REIT-grade operational dashboards

PLATFORM 02

Caleido Domi™ — Edge Intelligence + Environmental Sensing

Caleido Domi is Inspironics' hardware-as-a-service (HaaS) edge layer — a proprietary ecosystem of intelligent devices that transforms physical spaces into sensing, responsive, and self-optimizing environments. CD **converts Inspironics into a full-stack intelligent infrastructure company** with owned device IP at the edge.

Kinisi™

Advanced occupancy and motion intelligence — real-time space utilization analytics driving HVAC and lighting automation.

Amenos™

Environmental sensing layer — air quality, temperature, humidity, and CO₂ monitoring for health and compliance.

Afi™

Intelligent thermostat and climate control — AI-driven HVAC optimization delivering measurable energy reduction and comfort.

Caleido Kombos™ — AIoT Data Engineering + Orchestration

"CK is the valuation multiplier and scalability engine — the enterprise-grade infrastructure layer that transforms device data into platform intelligence at cloud scale."

MQTT Architecture

Lightweight, high-throughput messaging protocol enabling real-time device-to-cloud data streaming across tens of thousands of endpoints.

Multi-Tenant Infrastructure

Enterprise-grade Kubernetes-orchestrated cloud infrastructure supporting isolated, scalable deployments for diverse enterprise clients.

DevSecOps + CI/CD

Jenkins-powered continuous integration and deployment pipelines with embedded security — accelerating feature velocity without compromising reliability.

API-First Design

Open API architecture enabling seamless integration with Oracle, Microsoft, Honeywell, Schneider, and any third-party enterprise system.

PLATFORM 04

Cielo Epic™ — AI + ESG + Cognitive Intelligence Layer

Cielo Epic sits at the apex of the Inspironics stack — operationalizing ESG into measurable, auditable, and actionable infrastructure intelligence. CE delivers the executive-grade insight layer that transforms raw facility data into financial, regulatory, and strategic value.

Carbon Visibility

Real-time Scope 1 + 2 emissions tracking with regulatory-grade audit trails

Digital Twins

Living replicas of physical assets enabling predictive modeling and optimization

AI Copilots

Intelligent automation agents driving proactive maintenance and energy interventions

ESG Dashboards

Board-ready ESG evidence infrastructure with benchmarking and peer comparison

Unified Business Model — Multi-Layer Monetization Engine

Inspironics has engineered a diversified, recurring-revenue-first business model in which each platform layer generates independent revenue streams — compounding enterprise value across SaaS, HaaS, PaaS, and AI intelligence licensing.

Layer	Platform	Revenue Model	Value Driver
Experience	Caleido Xenia™	SaaS / Per-Room	Hospitality + REIT operational intelligence
Edge Devices	Caleido Domi™	HaaS Subscription	Owned device IP + environmental data streams
Platform	Caleido Kombos™	PaaS Licensing	Scalability engine + valuation multiplier
Intelligence	Cielo Epic™	AI SaaS / Analytics	ESG evidence + carbon intelligence + digital twins
Marketplace	Mints Ecosystem	Data Monetization	Third-party integrations + partner marketplace

✓ Recurring revenue architecture across all layers creates compounding enterprise value and premium valuation multiples.

Market Opportunity — Vertical Expansion Engine

Inspironics enters the market through its proven hospitality infrastructure base and executes a disciplined vertical expansion into adjacent, high-value infrastructure categories — each representing a multi-billion dollar addressable market for intelligent building and ESG compliance solutions.

\$1.9T

Smart Building TAM

Global intelligent building market projected through 2030

\$650B

ESG Tech SAM

Serviceable addressable market for ESG operational platforms

8

Verticals Targeted

Distinct infrastructure categories addressable with current platform stack

From Vision to Market-Proven Outcomes

Inspironics' next phase of institutional credibility requires transitioning from platform capability narrative to quantified, auditable, and replicable outcomes — the evidence infrastructure that institutional buyers and ESG-focused capital allocators demand before committing at scale.

Energy Savings

Targeted reduction in facility energy consumption across pilot deployments

Maintenance Reduction

Decrease in unplanned maintenance events via predictive AI intervention

Occupancy Optimization

Improvement in space utilization efficiency through Kinisi occupancy sensing

ESG Score Uplift

Measurable improvement in institutional ESG scoring post-deployment

Three-Phase GTM Roadmap

Inspironics executes a disciplined, phase-gated go-to-market strategy — anchoring in proven hospitality infrastructure, then scaling into commercial and healthcare, before deploying an industry-agnostic AIoT platform across the full global infrastructure market.

Strategic Partnerships & Ecosystem Integration

Inspironics is actively building a strategic partner ecosystem with the world's leading cloud, infrastructure automation, and enterprise technology platforms — accelerating integration depth, enterprise credibility, and go-to-market reach across every target vertical.

Microsoft Azure

Primary cloud infrastructure partner — Azure IoT Hub, AI services, and enterprise directory integration for CK + CE platform deployments.

Amazon Web Services

Secondary cloud infrastructure — AWS IoT Greengrass and Lambda enabling multi-cloud resilience and enterprise buyer flexibility.

Honeywell + Schneider Electric

Building automation and energy management integration — enabling CX and CD to interface directly with legacy BMS infrastructure at scale.

Siemens + Oracle

Enterprise ERP and industrial automation alignment — delivering CK API integrations for large-scale facility and campus management clients.

Competitive Positioning — Inspironics' Differentiated Stack

Inspironics occupies a uniquely differentiated position in the intelligent infrastructure landscape — combining the ESG intelligence of a software platform with the device ownership of a hardware company and the orchestration depth of an enterprise PaaS provider. No incumbent delivers this convergence from a single unified stack.

Company	ESG Intelligence	AIoT Device Ecosystem	Unified Platform Stack	Hospitality-Native
Inspironics	High	Yes	Yes	Yes
Honeywell	Medium	Yes	Partial	No
Siemens	Medium	Yes	Partial	No
Schneider Electric	High	Yes	Partial	No
Johnson Controls	Medium	Yes	No	No
Palantir	High	No	Partial	No

Key Differentiator: Unified AIoT + ESG + Infrastructure Intelligence Stack — purpose-built for the operationalized ESG economy, deployable across any building class or vertical.

Why Strategic Buyers **Will Act**

Inspironics represents a rare convergence of AIoT device ownership, enterprise software recurring revenue, ESG evidence infrastructure, and cross-vertical scalability — precisely the combination that strategic acquirers in building automation, industrial AI, and ESG technology are actively seeking to acquire rather than build.

Building Automation Acquirers

Honeywell, Johnson Controls, Siemens — seeking AIoT orchestration and ESG compliance intelligence layers to augment legacy BMS portfolios and command premium SaaS multiples.

ESG Software Platforms

ESG data and reporting platforms seeking owned device infrastructure, real-time sensor data, and operational intelligence to shift from spreadsheet-grade to facility-grade ESG evidence.

IoT + Industrial AI Leaders

Palantir-style AI operators and IoT infrastructure leaders seeking hospitality-native, facility-proven AI platforms with cross-vertical expansion optionality and recurring HaaS revenue.

BROKER NARRATIVE

An Emerging AIoT + ESG Intelligent Infrastructure Platform

"Inspironics sits at the convergence of four of the most durable enterprise technology megatrends: AIoT device intelligence, ESG operationalization, recurring SaaS infrastructure, and facility digitization — positioning it for significant valuation expansion and strategic exit optionality."

Multi-Platform Convergence

Four integrated platforms delivering compounding enterprise value across experience, edge, orchestration, and intelligence layers

Recurring Revenue Architecture

SaaS + HaaS + PaaS + AI SaaS — diversified subscription base with high net revenue retention potential

Cross-Vertical Scalability

Platform architecture designed for rapid vertical expansion from hospitality into commercial, healthcare, campuses, and beyond

ESG Operationalization

First-mover advantage in converting ESG mandates into deployed infrastructure intelligence with governance-grade audit evidence

Unified Architecture — Engineering Velocity Meets Enterprise Reliability

The Inspironics platform architecture is purpose-engineered for enterprise-grade reliability, infinite scalability, and cross-vertical deployment — connecting physical infrastructure at the edge to AI-driven intelligence in the cloud through a single, cohesive, and owned technology stack.

FINAL POSITIONING

The **Inspironics** Strategic Thesis

"Engineering the Intelligent Infrastructure of the ESG-Aware Economy"

Operational Intelligence

Real-time AI-driven insight across every facility asset, system, and environment — from edge sensor to executive dashboard.

Energy Optimization

Measurable, auditable energy reduction delivering immediate financial ROI and long-term carbon compliance value.

ESG Evidence Infrastructure

Governance-grade ESG documentation, carbon visibility, and institutional-quality reporting for boards, regulators, and capital markets.

Enterprise Scalability

Platform architecture built for global deployment — from a single boutique hotel to a 500-asset REIT portfolio to smart city infrastructure.
