

Inspironics AIoT ESG Platform Architecture

A unified, three-layer architecture designed to deliver scalable AIoT intelligence and ESG outcomes — from physical sensors at the edge to AI-driven monetization at the apex. Each layer is purpose-built to amplify the one above it, creating a cohesive platform for next-generation facility intelligence.

Top Layer — CIELO EPIC

- **ESG Intelligence:** Real-time carbon, energy, and sustainability scoring across facilities
- **AI/ML Optimization:** Predictive models that continuously tune operations for efficiency
- **Monetization (Mints):** Tokenized ESG value creation and incentive distribution

Mobile Applications

Native mobile experiences surface real-time facility data, ESG scores, and alerts directly to operators and sustainability managers on the go.

Ikanos → CE Dashboards

The Ikanos dashboard suite evolves into the Customer Experience (CE) layer delivering intuitive, role-based visualizations of operational and ESG performance.

Middle Layer — CALEIDO KOMBOS

- **IoT Data Platform:** Unified ingestion and management of high-velocity sensor streams
- **APIs / Integration:** Open, standards-based connectors bridging edge and intelligence layers
- **Analytics Pipelines:** Streaming and batch processing for operational and ESG insights

Base Layer

- **CX:** Facility management systems and customer experience touchpoints
- **CD Sensors:** Amenos (air quality), Afi (energy), Kinisi (occupancy & motion)

Scalable by Design

Every component is architected for horizontal scale — from a single facility deployment to enterprise-wide, multi-site AIoT and ESG intelligence at global scope.
