

Key Investor Questions

What we are hearing in early conversations

10x increase
seems
unrealistic

Where is the
revenue to
support this?

Is the
platform truly
integrated?

What IP is
actually
defensible?

Why would a
buyer pay this
premium?

Are there
comparable
transactions?

Is this
founder-driven
optimism?

What reduces
execution
risk?

➤ These are valid — but based on a product-stage lens

How We Reframe the Conversation

From Product Thinking → Platform + IP Thinking

OLD LENS — Investor Concern

- Product-stage valuation logic
- Revenue-first validation
- Feature-level differentiation
- Execution risk focus.

This is not a 10x jump — it is a shift in valuation framework.

NEW LENS — Our Positioning

- ✓ Platform ecosystem valuation
- ✓ Scalability + repeatability focus
- ✓ Architecture + IP defensibility
- ✓ Risk compression through integration.

Next 60–90 Days → Converts narrative into buyer-validated value.

Why Valuation Re-Rates Non-Linearly

From Product Risk → Platform + IP Premium

Earlier: Buyer evaluates risk

This is where multiples expand.

Now: Buyer evaluates scalability + defensibility
