

IIoT Europe 2018 → 2026

Survivors, Scale-ups, Acquisitions, Failures & Sensor Partner Fit for CK/CE

Strategic Portfolio Review · Inspironics Board & Engineering Leadership

The 2018 Landscape

A continent buzzing with IIoT ambition

Over 200 European IIoT startups mapped across verticals — agriculture, logistics, infrastructure, buildings, and industrial maintenance. Connectivity hype was at its peak. LoRaWAN and Sigfox coverage wars defined the era.

2026 Status Heatmap

Where did the 2018 cohort land?

	Agri	Logistics	Buildings	Industrial	Infrastructure
 Active / Scaled	28	31	24	42	37
 Acquired / Consolidated	18	20	16	28	22
 Bankrupt / Restructured	15	17	19	23	15
 Dormant / Unknown	14	12	11	15	11

Active / Scaled — 35% of cohort: strong vertical focus, recurring SaaS

Acquired / Consolidated — 25%: absorbed by industrials, telcos, ag platforms

Bankrupt / Restructured — 22%: broad platform plays, capital-intensive

Dormant / Unknown — 18%: pivoted beyond IIoT or quietly dissolved

The Survivors & Scale-ups

16 companies that found durable product-market fit

 KONUX 	 Worldsensing 	 Morphosense 	 Weenat 
 Pycno 	 Karnott 	 Libelium 	 Traxens 
 ProGlove 	 Sensorberg 	 Nexess 	 Enerbrain 
 OpenSensors 	 Ineo-Sense 	 Newsteo 	 Connit 
 Flyability 	 Donecle 	 Delair 	

-  • **Rail & Infrastructure:** KONUX, Worldsensing, Morphosense
-  • **Agriculture:** Weenat, Pycno, Karnott, Libelium
-  • **Logistics & Asset:** Traxens, ProGlove, Sensorberg, Nexess
-  • **Buildings & Energy:** Enerbrain, OpenSensors, Ineo-Sense, Newsteo, Connit
-  • **Drone Inspection:** Flyability, Donecle, Delair

Acquired & Consolidated

Strategic absorption by industrials and ag platforms

- **Sigfox** → **UnaBiz**: LPWAN network rescued, replatformed in Asia-EU
- **Sencrop** → **ISAGRI**: precision ag data folded into ERP leader
- **Connecterra sensor biz** → **Datamars**: livestock IoT absorbed into RFID giant
- **Morphosense assets** → **Sercel**: structural sensing IP acquired by geophysics OEM
- **Bestmile tech** → **ZF**: autonomous fleet orchestration absorbed into Tier 1
- **Avenisense** → **WIKA TECH**: inline liquid sensing integrated into industrial measurement

Failure & Stall Patterns

Why 40%+ of the 2018 cohort did not make it

Broad horizontal IoT platforms — no defensible vertical wedge

Weak or unmeasurable ROI for the end customer

18–36 month hardware sales cycles drained runway

Business model anchored to connectivity hype, not recurring data value

No SI/channel ecosystem to scale without a direct sales army

Survival Pattern

The five traits shared by every survivor

1. Narrow vertical wedge — one industry, one pain point, owned deeply
2. Measurable, fast-payback ROI — 6-18 months max
3. Integrated stack — sensor + connectivity + cloud + analytics as one offer
4. Regulatory or compliance pull — mandatory reporting drives adoption
5. Channel partnerships — SI, distributor, or OEM as primary go-to-market

Sensor Partner Shortlist for CK/CE

Root-zone / Soil Moisture:

Weenat, Pycno, Sencrop/ISAGRI, Libelium

weenat

PYCNO

Sencrop
ISAGRI

libelium

Vibration / Structural / PdM:

KONUX, Morphosense/Sercel, Worldsensing

KONUX

morphosense
sercel

WORLD
SENSING

Air Quality / Building Comfort:

Enerbrain, OpenSensors, Libelium, Connit

enerbrain

OpenSensors

libelium

connit

Energy / HVAC Optimization:

Enerbrain, Libelium, Connit, Ineo-Sense

enerbrain

libelium

connit

ineo-sense

Temperature / Humidity / Shock:

Newsteo, Traxens, Ineo-Sense

newsteo

TRAXENS

ineo-sense

Asset Tracking / RFID / Warehouse:

ProGlove, Nexess, Sensorberg, Balyo, Traxens

PROGLOVE

NEXESS

sensorberg

BALYO

TRAXENS

Drone / Thermal / Visual Inspection:

Flyability, Delair, Donecle, Uavia

FLYABILITY

DELAIR

DONECLE

UAVIA

CK/CE Integration Architecture

Third-party sensors → edge → gateway → platform → insights

Sensors at edge connect via MQTT, LoRaWAN, NB-IoT, or LTE-M → Intellihub gateway normalizes payloads → CK device registry manages fleet → CE delivers ESG, APM, and OEE analytics.

Partner Fit Scoring Matrix

Seven criteria, three partner tiers

CRITERIA	TIER 1	TIER 2	TIER 3
1. API readiness & documentation quality	●	●	●
2. India market availability & regulatory compliance	●	●	●
3. Sensor reliability & field-proven track record	●	●	●
4. Calibration support & SLA coverage	●	●	●
5. Unit price & total cost of deployment	●	●	●
6. SaaS model alignment & white-label options	●	●	●
7. SI / channel ecosystem friendliness	●	●	●

Business Model Choices

Five engagement structures for CK/CE sensor partnerships

1. Reseller

margin on sensor
hardware, easiest entry

2. OEM Bundle

co-branded device +
CK platform, high
stickiness

3. Sensor-agnostic Connector

open API abstraction
layer, widest reach

4. Joint GTM

co-sell into verticals,
shared pipeline and
quota

5. Data Marketplace

sensor data as a product,
highest long-term margin

The CK/CE Moat

We orchestrate – we do not compete with sensors

CK/CE is sensor-agnostic by design. Every partner sensor that connects deepens the data lake, enriches AI models, and increases switching cost – without requiring Inspironics to manufacture hardware.

Recommended Pilots

Six verticals, six proofs of value

- 1 Smart Agriculture –**
soil moisture, microclimate, irrigation ROI

- 3 Factories –**
vibration-based predictive maintenance, OEE uplift

- 5 Predictive Maintenance –**
rail, bridges, industrial assets

- 2 Commercial Buildings –**
comfort, air quality, energy HVAC optimization

- 4 Energy / ESG –**
real-time emissions, consumption benchmarking

- 6 Logistics / Warehouse –**
asset tracking, cold-chain, dock efficiency

Shortlist: Top 10 Partner Targets

Ranked by strategic value × partner readiness

- **Tier 1 (Immediate):** KONUX, Enerbrain, ProGlove, Weenat, Traxens

- **Tier 2 (90-day):** Worldsensing, Libelium, Newsteo, Delair, OpenSensors

Tier 1 targets have documented APIs, existing SaaS contracts, and at least one India-adjacent reference customer.

90-Day Validation Roadmap

DISCOVERY & API AUDIT

DAYS 1–30

PILOT DEPLOYMENT & INTEGRATION

DAYS 31–60

COMMERCIAL VALIDATION & BOARD REVIEW

DAYS 61–90

Board Recommendation & Next Actions

Authorize sensor partnership program for CK/CE

1. Approve \$150K pilot budget across two verticals (Agriculture, Buildings)
2. Assign integration engineering lead and partner BD owner by Day 7
3. Mandate sensor-agnostic connector architecture as platform standard
4. Return to board at Day 90 with commercial term sheets from ≥ 3 Tier 1 partners

CK/CE's long-term defensibility is the orchestration layer — every sensor partner that connects widens the moat.
