

Caleido Kombos (CK)

The Intelligent Infrastructure Operating Fabric

Engineering the AIoT + ESG + Utility Resource Platform for the Smart World

INSPIRONICS

INVESTOR BRIEF

CONFIDENTIAL

Why CK Exists

The Problem

The world lacks a unified intelligent infrastructure operating layer capable of orchestrating energy, water, air, utilities, occupancy, security, sustainability, predictive maintenance, and resource optimization — all in one coherent fabric.

Existing systems are **fragmented, proprietary, siloed, and non-interoperable**. Every vertical operates in isolation. Intelligence is trapped inside closed architectures.

The CK Answer

- **AIoT Intelligence**
Sensor-to-cloud orchestration at enterprise scale
- **ESG Fabric**
Embedded sustainability across every vertical
- **Open Ecosystem**
Vendor-agnostic, marketplace-extensible platform
- **Edge + Cloud**
Hybrid infrastructure resilience at scale

- ❑ **CK becomes "The Universal Infrastructure Intelligence Fabric"** — unifying devices, data, decisions, and sustainability into one operating system for the built world.

The Executive Thesis

From Devices to Decisions

Caleido Kombos is engineered to be the missing intelligence layer between physical infrastructure and operational outcomes — transforming raw sensor data into actionable ESG intelligence, predictive automation, and enterprise-grade resource optimization.

Universal Connectivity

LoRaWAN, BACnet, Modbus, MQTT, Zigbee, BLE — every protocol, every device, one fabric

AI-Native Core

Predictive maintenance, occupancy analytics, and carbon intelligence built into the platform DNA

ESG Intelligence

Embedded sustainability reporting, carbon analytics, and utility optimization at every layer

SaaS Scalability

Multi-tenant architecture enabling asset-light global scaling across industries and geographies

CK in the Business Model Matrix

PRIMARY POSITION

Network-Centric + Product-Centric

CK drives compounding value through data network effects — more sensors generate richer intelligence, which attracts more partners, which expands the ecosystem. The platform itself is the product: device-agnostic, AI-enriched, marketplace-extensible.

- Platform ecosystem with marketplace extensibility
- Data network effects compounding over time
- Multi-tenant SaaS with edge orchestration
- Sensor interoperability as structural advantage

SECONDARY & LONG-TERM

Customer-Centric → Resource-Centric

Vertical specialization in hospitality, healthcare, and agriculture deepens customer lock-in. The long-term evolution moves CK toward resource intelligence — water optimization, energy balancing, carbon reduction, and smart grid participation.

- Hospitality workflows & guest personalization
- Healthcare patient safety & IAQ compliance
- Agriculture sustainability optimization
- Utility intelligence & ESG marketplaces

Customer-Centric

hospitality, healthcare,

CK Platform Architecture

Engineering the Infrastructure Operating System — Six Intelligent Layers

Infrastructure Intelligence at Planetary Scale — Each layer is independently deployable yet tightly integrated, enabling modular adoption without sacrificing system-wide intelligence.

Layer 1–2: Device & Sensor Foundation

LAYER 1 — PROPRIETARY DEVICES

CX Device Ecosystem

- Intelligent locks & access control
- Indoor air quality (IAQ) sensors
- Energy consumption meters
- Water flow & leak detection meters
- Occupancy & presence sensors
- LoRaWAN, Zigbee, BLE edge nodes
- Modbus, BACnet, MQTT-compatible devices

LAYER 2 — OPEN VALIDATION

Vendor-Agnostic Interoperability

CK deliberately supports and validates the broadest possible hardware ecosystem — breaking the proprietary lock-in trap that has stifled enterprise IoT adoption for decades.

- Commodity & industrial open sensors
- Raspberry Pi & ESP32 ecosystems
- Arduino open hardware platforms
- Edge AI gateway integrations

Layer 3–4: Edge Intelligence & Platform Core

Edge Intelligence Layer

- MQTT brokers for real-time messaging
- On-device edge inference
- Local anomaly detection & alerting
- Fail-safe automation & override logic
- OTA firmware management at scale

CK Platform Core

- Device registry & identity management
- Rule engine & AI orchestration
- Event processing & time-series analytics
- ESG intelligence & sustainability engine
- Multi-tenant SaaS architecture

AI + ESG Intelligence Layer

- Predictive maintenance & failure detection
- Occupancy & behavioral analytics
- Carbon footprint & utility optimization
- AI copilots & workflow automation

Three High-Value Verticals. One Intelligent Platform.

Hospitality

CK becomes the **CX backbone evolution** for smart room orchestration, energy optimization, predictive maintenance, and ESG compliance. Delivers 20–40% energy savings, reduced maintenance overhead, and measurable guest satisfaction uplift through personalized environment intelligence.

Healthcare

IAQ intelligence, patient environment monitoring, infection prevention, and asset tracking converge into a single command center. CK ensures utility resilience, ESG compliance, and safety outcomes — critical in an era of heightened regulatory scrutiny.

Agriculture

Smart irrigation, soil monitoring, water optimization, and climate intelligence enable sustainable farming at scale. CK maps smart agri clusters to ESG-linked financing, connecting water conservation directly to carbon credit and sustainability reporting frameworks.

Hospitality: CK as the Revenue-Generating Intelligence Layer

CK transforms hospitality properties from reactive operations to **proactive intelligence environments**. Every room, corridor, utility meter, and access point becomes a data-generating node feeding continuous optimization loops — reducing energy waste, preventing equipment failures before they occur, and personalizing guest environments in real time.

20–40%

Energy cost reduction

35%

Maintenance cost savings

ESG

Compliance reporting

Core Capabilities

- Smart room orchestration & automation
- Predictive HVAC & equipment maintenance
- Energy benchmarking & optimization
- Guest personalization via occupancy AI
- ESG compliance & sustainability reporting
- Staff efficiency & workflow automation

Open Ecosystem Strategy

Why Open Ecosystems Win

CK deliberately avoids closed proprietary lock-in — the structural flaw that has limited every legacy building management system. By embracing openness at every layer, CK accelerates adoption, deepens ecosystem density, and creates compounding network effects that closed competitors cannot replicate.

Open APIs

RESTful and MQTT APIs enabling frictionless integration with any third-party system, dashboard, or workflow tool

Open Sensor Stack

Validated support for commodity, industrial, and open-hardware sensors eliminates vendor dependency at the device layer

Multi-Cloud Deployment

AWS, Azure, and Google Cloud compatibility ensures enterprise flexibility and prevents hyperscaler lock-in

Partner Extensibility

Third-party edge hardware, marketplace modules, and white-label configurations enable rapid ecosystem expansion

👉 The Apple App Store model for infrastructure intelligence — CK provides the rails, partners and customers build the value on top.

Cloud Hyperscaler Alignment Strategy

Positioned as the Intelligence Layer Across AWS, Azure, and Google Cloud

Amazon Web Services

- AWS IoT Core & Greengrass integration
- SageMaker for AI model deployment
- AWS Sustainability stack alignment
- MAP funding & PoC grant access
- AWS Marketplace co-sell opportunity

Microsoft Azure

- Azure IoT Hub & Digital Twins
- Azure AI Fabric analytics layer
- ESG reporting stack integration
- Position CK as "Azure Intelligent Infrastructure Layer"
- Enterprise co-sell through Microsoft channels

Google Cloud

- Vertex AI model training & inference
- Sustainability analytics integration
- TensorFlow edge intelligence deployment
- Smart city analytics & geospatial APIs
- Climate AI research alignment

Go-To-Market Flywheel

Channel & Ecosystem Partners

- Managed Service Providers (MSPs)
- System Integrators & EPC firms
- ESG consultants & sustainability advisors
- Utility providers & energy managers
- Smart building technology partners
- Hospitality technology integrators
- Healthcare infrastructure firms

Partner Revenue Models

White Label

Branded deployments for large SIs

Rev Share

Recurring SaaS revenue split

Marketplace

Commission on module sales

HW Bundles

Integrated device + SaaS packages

USA + India Grant Strategy

Dual-Market Innovation Funding — CK as the India-USA Intelligence Bridge

US PROGRAMS

Federal & State Funding Alignment

- **DOE** — Energy optimization & infrastructure resilience grants
- **NSF SBIR** — AI-driven sustainability innovation
- **ARPA-E** — Advanced energy technology programs
- **Smart Cities** — Urban AIoT deployment grants
- **Co.Lab** — Climate tech accelerator programs
- **State Clean Energy Programs** — Carbon reduction initiatives

IN INDIA PROGRAMS

National Innovation & Digital Infrastructure

- **IMPACT & IPTIF** — Deep tech infrastructure funding
- **Elevate Karnataka** — State startup scaling grants
- **MeitY** — Digital infrastructure & AI programs
- **Smart Cities Mission** — Urban AIoT deployment
- **Startup India / Digital India** — Innovation bridge grants
- **AgriTech Funds** — Smart farming & water innovation

① CK's alignment with energy optimization, carbon reduction, infrastructure resilience, and AI-driven sustainability positions it at the center of the most heavily funded government programs in both markets.

Competitive Intelligence Matrix

CK vs. Legacy Infrastructure Platforms

Capability	CK	Honeywell Forge	Siemens MindSphere	Schneider EcoStruxure	JCI	Cisco IoT	Facilio	Enlightened
Open Sensor Support	✓✓✓	✗	Partial	Partial	✗	Partial	✓	✗
ESG Intelligence	✓✓✓	✓	✓	✓✓	✓	✗	✓	✗
AI-Native Architecture	✓✓✓	Partial	✓	Partial	Partial	✓	✓	✓
Hospitality Specialization	✓✓✓	✗	✗	✗	✗	✗	Partial	✗
Multi-Industry Extensibility	✓✓✓	✓✓	✓✓	✓✓	✓	✓	Partial	✗
Marketplace Extensibility	✓✓✓	✗	Partial	✗	✗	Partial	✗	✗
Pricing Flexibility	✓✓✓	Low	Low	Low	Low	Medium	Medium	Low

🟢 **CK = Agile + Open + AI-Native** — The only platform engineered from the ground up to be simultaneously open, multi-vertical, AI-native, and marketplace-extensible.

The CK Competitive Moat

Seven Structural Advantages That Compound Over Time

1

Data Network Effects

More sensors → richer intelligence → stronger platform value. Every new device deployment deepens the AI model accuracy for all customers.

2

Cross-Industry Intelligence

Hospitality, healthcare, and agriculture convergence creates unique cross-domain AI insights unavailable to single-vertical competitors.

3

ESG Intelligence Layer

Embedded sustainability intelligence becomes a regulatory compliance necessity — not a feature — as ESG mandates tighten globally.

4

Device + SaaS Integration

The tight coupling of hardware, edge firmware, and cloud intelligence creates a multi-layer switching cost that is extremely difficult to replicate.

5

Workflow Intelligence

Operational behavioral learning embeds CK into daily workflows — increasing stickiness with every passing month of deployment.

6

Edge + Cloud Hybrid

Enterprise resilience through local edge processing ensures mission-critical operations continue even during cloud connectivity interruptions.

CK Pricing Architecture

Multi-Dimensional SaaS Revenue Model Designed for Scale

SUBSCRIPTION TIERS

Tier	Unit	Target
Starter	Per device	SMB / Pilots
Professional	Per room / acre	Mid-market
Enterprise	Per facility	Multi-site ops
Marketplace	Commission %	Ecosystem partners
ESG Premium	Intelligence add-on	Compliance buyers

REVENUE STREAMS

Layered Monetization Architecture

CK SaaS Financial Engine

Unit Economics & Growth Model

CK's multi-layer revenue model generates **high-margin recurring revenue** from day one. Hardware seeding reduces CAC by bundling device deployment with long-term SaaS contracts. Expansion revenue compounds through upsells into ESG intelligence, AI analytics, and marketplace modules.

5–7x

LTV / CAC Ratio

Target unit economics at scale

<5%

Annual Churn

Infrastructure stickiness advantage

70%+

Gross Margin

SaaS layer at steady state

130%

NRR Target

Through upsell & expansion revenue

Why CK is Asset-Light at Scale

- Multi-tenant SaaS eliminates per-customer infrastructure cost
- Open hardware strategy removes COGS dependency
- Marketplace modules monetize without incremental engineering
- Partner channel reduces direct sales CAC significantly
- Edge AI reduces cloud compute costs per device

Every new sensor deployed increases platform intelligence without proportional cost increase — the defining characteristic of a scalable AI infrastructure business.

ROI Model: Across All Three Verticals

Hospitality ROI

- **20–40%** energy cost reduction via smart HVAC + occupancy AI
- **35%** reduction in unplanned maintenance events
- **15–20%** improvement in staff operational efficiency
- Occupancy optimization through real-time demand sensing
- ESG compliance enabling access to green financing

Healthcare ROI

- IAQ compliance reducing infection risk & liability exposure
- **99.5%+** asset uptime via predictive maintenance AI
- **25–35%** energy savings in HVAC-heavy environments
- Risk mitigation through continuous patient environment monitoring
- Regulatory compliance reporting automation

Agriculture ROI

- **30–50%** water usage reduction through smart irrigation AI
- Yield optimization via soil & climate intelligence integration
- Automated ESG & sustainability reporting for green financing
- Reduced input costs through precision resource management
- ESG-linked carbon credit access & water offset programs

Why CK Changes the Exit Equation

The Transformation Story

CK transforms Inspironics from a product hardware company into an **AI Infrastructure Platform Company** — fundamentally rerating the valuation multiple, the revenue quality, and the strategic acquisition appeal.

Valuation Premium Drivers

- **SaaS Revenue Quality**
Recurring, predictable, high-margin — commanding 10–20x ARR multiples vs. 2–4x for hardware
- **ESG Premium**
Sustainability intelligence commands strategic premium in current M&A environment
- **AI Infrastructure Premium**
AI-native platforms attracting highest strategic multiples in 2024–2026 M&A cycle
- **Data Asset Value**
Proprietary infrastructure sensor datasets represent irreplaceable strategic acquisition value

Strategic Buyer & Exit Alignment Framework

Potential Strategic Acquirers

- **Industrial Conglomerates:** Honeywell, Siemens, Schneider Electric, Johnson Controls
- **Technology Platforms:** Cisco, AWS, Microsoft, Google
- **ESG & Sustainability:** Dedicated ESG platform companies & PE firms
- **Smart Infrastructure PE:** Infrastructure-focused private equity with ESG mandates
- **Hospitality Tech:** Oracle Hospitality, Amadeus, Mews strategic acquirers
- **Utility Intelligence:** Enel X, Schneider, Landis+Gyr

What Makes CK Strategically Irresistible

Revenue Predictability

Multi-year SaaS contracts with embedded switching costs and expansion revenue built in

Data Ownership

Proprietary infrastructure intelligence datasets with compounding value over deployment lifetime

Ecosystem Leverage

Established partner network and marketplace reduces integration risk for acquirer

Global Scalability

India-USA dual-market positioning with grant-funded expansion reduces acquisition risk premium

Execution Roadmap: Four Phases to Global Scale

CK — Building the Operating System for Intelligent Infrastructure

Inspironics is not merely building products. It is engineering the digital nervous system for the future smart world.

"Where AI Meets Utilities"

The convergence layer between physical infrastructure and intelligent automation

"Infrastructure Intelligence for the Smart World"

From raw sensor data to actionable ESG outcomes — at planetary scale

"From Devices to Decisions"

The complete intelligence stack: connect, sense, analyze, automate, optimize

"Engineering Sustainability at Scale"

Sustainable resource orchestration embedded in every deployment by design

Caleido Kombos is the infrastructure intelligence fabric the world has been waiting for — and Inspironics is the team positioned to build it.
