

Exit Bridge Alignment → Value Realization Protection

A strategic funding decision stands between current momentum and a premium exit outcome. With the Data Room nearing completion, IP stack at critical maturity, and broker engagement underway, one short-term gap risks compressing a nine-figure valuation — or preserving it.

BRIDGE INVESTMENT BRIEFING

Where We Stand Today

The company has reached a pivotal inflection point. Each foundational element of a premium exit is in place — execution continuity is the only remaining variable.

Data Room

Nearing full completion — institutional-grade documentation and financial disclosure packages are in final preparation for buyer review.

Product & IP Stack

Reaching critical maturity — proprietary technology and intellectual property portfolio are approaching the defensibility threshold that commands premium valuations.

Broker Engagement

Formally initiated with Wedbush Securities — qualified intermediary relationships are active and buyer outreach sequencing has begun.

The Gap

A short-term funding gap risks delaying value realization — threatening to stall momentum at the worst possible moment in the exit timeline.

The Value at Stake: Two Paths Forward

The bridge funding decision is binary. Every dollar of bridge capital either protects or forfeits a multiple of its value in exit proceeds. The scenarios below illustrate the divergence clearly.

✓ WITH BRIDGE FUNDING

Premium Exit Trajectory

- Maintain **execution continuity** — no disruption to product, IP, or team deliverables
- Complete **Data Room readiness** — buyers receive a fully packaged, institutional-quality diligence file
- Enable **premium buyer engagement** — strategic acquirers and financial sponsors negotiate from a position of strength
- Preserve **\$90M–\$120M valuation outcome** — the full value of years of IP development is realized

● WITHOUT BRIDGE FUNDING

Distressed Exit Risk

- Delays in **IP finalization** — incomplete deliverables signal execution risk to prospective buyers
- **Reduced buyer confidence** — funding gaps create narrative problems that sophisticated acquirers exploit in negotiation
- **Forced discounting** — timeline pressure and buyer leverage combine to compress offer prices materially
- Potential drop to **\$40M–\$60M outcome** — a valuation haircut of \$50M–\$60M on an otherwise premium asset

Valuation Outcome: The Bridge Difference

The following comparison quantifies the direct financial impact of bridge funding on exit proceeds. The gap between outcomes — up to **\$80M in additional value** — dwarfs the cost of the bridge by more than 6,000x.

Scenario

The Bridge Ask: Structured for Alignment

The total bridge requirement is purposefully modest relative to the value it protects. Capital is structured to distribute responsibility across aligned stakeholders — each with a proportionate, clearly defined commitment.

\$12.8K

Total Bridge Required

Full capital requirement to complete Data Room, maintain execution, and enable premium buyer engagement through close

\$2.5K

Per Stakeholder

Approximate split across participating bridge investors — a fraction of the per-party value creation potential

6,000x

Value Multiplier

At minimum, every dollar of bridge capital protects more than \$6,000 in potential exit proceeds at the low-end scenario differential

Why This Bridge, Why Now

Timing is not incidental — it is the entire argument. Bridge capital deployed at this stage of the exit process carries the highest return profile of any capital in the company's history.

01

Data Room Completion

Final documentation packages are assembled and formatted for institutional buyer review — requiring only bridge capital to complete without interruption.

03

Broker-Facilitated Buyer Outreach

Wedbush Securities engagement advances to active buyer targeting — a process that requires operational stability and a complete diligence package.

02

IP Finalization & Defense

Remaining IP formalization steps protect and enhance the defensibility of the technology stack — a direct driver of valuation multiples in M&A transactions.

04

Premium Close

Transaction closes at the high end of the valuation range — \$90M–\$120M — with bridge investors participating in a structurally protected, priority position.

"Bridge funding is not expense — it is valuation protection and amplification."

Every dollar committed at this stage is a deliberate decision to capture the full value of the asset that has already been built. The work is done. The exit is in motion. The only question is whether the outcome is realized at its full potential — or surrendered at a discount.

Protect

Defend against forced discounting and buyer-leverage scenarios that compress valuation under distress conditions

Complete

Finalize the Data Room and IP stack with no disruption — presenting buyers with a fully packaged, confidence-inspiring asset

Amplify

Enable premium pricing negotiations from a position of operational strength — unlocking the full \$90M–\$120M+ outcome
