

Smart Agriculture → \$100M ESG AIoT Platform

From Pilot Fields to Global Markets – Building the infrastructure that turns farming data into ESG value, carbon credits, and lasting impact.

INVESTMENT DECK · 2024

The Problem

A Broken System

Emerging market agriculture operates in silos – **fragmented data, invisible ESG outcomes, and billions in carbon value left on the table**. Farmers, corporates, and regulators are disconnected, with no unified platform to capture, verify, or monetize impact.

Fragmented Farming

No unified sensor-to-insight layer across smallholder and commercial farms

Invisible ESG Impact

Sustainability outcomes go unmeasured, unverified, and unreported

Untapped Carbon Value

Millions of carbon credit opportunities unclaimed in emerging markets

CHAPTER 1 · ENTRY STRATEGY

Our Entry Wedge

Smart Agriculture pilots in India – **grant and CSR funded** – provide the lowest-risk, highest-credibility path to building a global AIoT platform.

India Pilots

Live deployments in key agricultural regions with measurable impact data

Grant Funded

Non-dilutive capital from government and development agency programs

CSR Backed

Corporate sustainability mandates fund deployment and accelerate adoption

Caleido Kombos — The IoT Backbone

Connected Infrastructure at Scale

Caleido Kombos is the physical and connectivity layer — ruggedized sensors, edge devices, and field gateways that capture soil, weather, crop, and water data in real time.

Edge Connectivity

LoRaWAN and cellular mesh for remote field coverage

Field Data Capture

Soil, moisture, temperature, yield — all in one unified stream

Device Agnostic

Open protocol integrations with third-party sensor ecosystems

Cielo Epic — The AI Intelligence Layer

From Raw Data to ESG Insight

Cielo Epic sits above the IoT layer — ingesting field data and transforming it into verified ESG scores, carbon baselines, predictive alerts, and compliance-ready reporting for corporates and regulators.

Predictive AI

Crop yield forecasting and anomaly detection

ESG Scoring

Automated, verifiable sustainability metrics

Carbon Baseline

Audit-grade carbon accounting from field data

Four-Stream Monetization Engine

1

SaaS Subscriptions

Recurring platform fees from agri-corporates, cooperatives, and NGOs

2

ESG Analytics

Premium dashboards and compliance reporting for enterprise clients

3

Carbon Credits

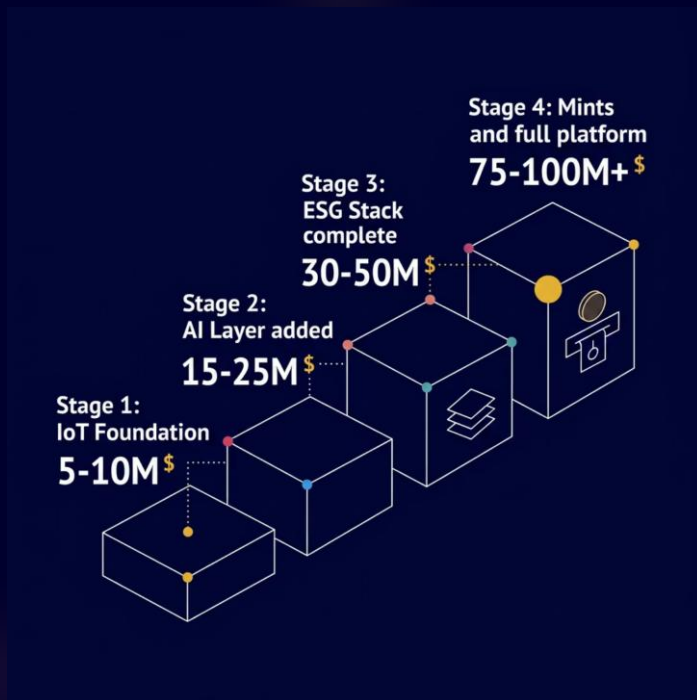

Tokenized and verified credits generated from certified farm practices

4

Caleido Mints

Digital asset layer enabling impact investment, tokenized rewards, and secondary market liquidity

Valuation Bridge: \$5M → \$100M+

Each Layer Multiplies Value

The platform is architected as a **compounding value stack**. Each new capability — AI, ESG, Mints — doesn't just add revenue; it re-rates the entire business at a higher multiple.

IoT — \$5–10M

Hardware + connectivity foundation

AI — \$15–25M

Intelligence and predictive analytics

ESG — \$30–50M

Compliance, carbon, and reporting suite

Mints — \$75–100M+

Digital assets, liquidity, and scale

Traction & Proof Points

Early Signals Validate the Thesis

Our India pilots are generating real data, real partners, and real revenue signals — de-risking the platform story for investors.

Pilot Deployments Live

Active sensor networks across multiple farm clusters in India

Grant Milestones Hit

Verified funding tranches unlocked from government and development partners

CSR LOIs Signed

Corporate sustainability budgets committed for next-phase rollout

Go-to-Market Roadmap

India is the proof-of-concept. Southeast Asia and Africa represent the **next 500M+ smallholder farmers** – with ESG mandates from global corporations creating the demand pull at every stage of expansion.

THE ASK

Join the \$100M Journey

Use of Funds

- Scale Kombos sensor deployments across India & SE Asia
- Accelerate Cielo Epic AI and ESG analytics development
- Launch Caleido Mints tokenization infrastructure
- Build the GTM team for enterprise and carbon markets

The Investment Thesis

Agriculture is a **\$3T global industry** with near-zero digital ESG infrastructure. We are building the layer that makes it measurable, monetizable, and investable.

"Agriculture is the wedge. ESG
AloT is the platform."

Seed → Series A bridge round open.
Early investors co-shape the product roadmap and capture maximum upside in the valuation bridge.
